Submitted to: TK Mold Executive Leadership

Date: April 14, 2026

CONFIDENTIAL — FOR INTERNAL REVIEW ONLY

A Practical Proposal for a Changing Market

This proposal is submitted by Henderson Tooling Associates, Inc. DBA MoldMinds.com to TK Mold leadership. It is written plainly and directly, because the situation calls for it.

The past year has been genuinely difficult. Geopolitical tensions and escalating tariff pressures have disrupted supply chains, eroded margins, and created real uncertainty for manufacturers and toolmakers operating across borders. The global economy has absorbed significant damage and the effects are being felt at every level of the injection molding industry.

In this environment, North American customers are not waiting to see what happens. The majority of molders we work with are actively exploring how to reduce their dependence on China for tooling. They are looking for options to produce closer to home, or at minimum, to have a reliable support infrastructure on U.S. soil that can respond quickly when problems arise. This is no longer a preference. For most customers it is becoming a business requirement.

It is reckless for any toolmaker with North American customers to not be actively pursuing the means to support production in the U.S. market. The customers are asking for it, and those who can deliver it will earn the business.

01 WHAT NORTH AMERICAN CUSTOMERS ACTUALLY NEED

From direct, ongoing engagement with molders across North America, the picture is clear. Customers need two things above all else. First, they need optionality — the ability to source tooling that is not entirely dependent on one country or one supply chain. Second, they need a team of qualified experts who can be deployed quickly to their facilities when technical problems arise. Troubleshooting, diagnostics, start-ups, modifications and repairs conducted on U.S. soil, with no waiting for someone to fly in from overseas.

MoldMinds.com is being built specifically to provide both of these things on behalf of TK Mold. A professional, U.S.-based support infrastructure staffed by engineers who can be dispatched on demand. This is what will differentiate TK Mold from competitors in this market going forward.

02 TK MOLD'S EXISTING INVESTMENT

Despite a difficult market, real progress has been made. Over the past 12 months, Henderson Tooling Associates, Inc. DBA MoldMinds.com has worked to establish TK Mold's presence and reputation in North America. Relationships have been built with reputable U.S. toolshops. The MoldMinds.com brand has been developed and brought to market. The domain tkmold.us has been purchased and is ready to be built out to TK Mold's brand standards upon agreement. Active molder relationships are in place and creating pipeline for new business. TK Mold has invested real resources in this relationship. This proposal is about protecting that investment and building a structure around it that can sustain and grow it regardless of what the market does next.

03 WHY THIS PARTNERSHIP MAKES SENSE FOR TK MOLD

TK Mold's investment in North America is protected.

Without a formal structure, TK Mold's North American presence depends entirely on one individual. If that individual's circumstances change, the investment is at risk. Formalizing this through Henderson Tooling Associates, Inc. DBA MoldMinds.com means TK Mold's relationships, brand presence, and market position are held by a legal entity with a team behind it. The entity does not change jobs.

TK Mold gains real continuity of U.S. representation for the first time.

Henderson Tooling Associates, Inc. will build a dedicated team of process engineers and tooling engineers who can be deployed on demand across North America. TK Mold will no longer rely on a single point of contact. When a customer needs support, MoldMinds.com dispatches the right person. This is a structural advantage that TK Mold does not currently have and that competitors will struggle to match.

The silent partnership structure is intentional and protects both parties.

The principal of Henderson Tooling Associates, Inc. also holds a position representing Husky injection molding machines. That role provides personal financial security, particularly if geopolitical conditions further impact cross-border business volumes. Rather than being a conflict, this is an advantage for TK Mold. The Husky role means regular, trusted access to molders across North America at the operational level. Every one of those conversations is a potential introduction to TK Mold's capabilities through the MoldMinds.com team. The silent partnership structure ensures there is no interference between the two roles, and TK Mold receives full professional representation under the MoldMinds.com brand at all times.

TK Mold gains a dedicated U.S. brand presence at no cost.

The domain **tkmold.us** has already been secured by Henderson Tooling Associates, Inc. Upon agreement, a full professional website will be built to match TK Mold's brand standards at MoldMinds.com's expense. TK Mold pays nothing for it.

TK Mold gets a partner whose market access grows over time, whose team is built to serve TK Mold's customers, and whose structure provides continuity that a single individual cannot. That is what this proposal delivers.

04 PROPOSED STRUCTURE

Silent Managing Agency for North America

Henderson Tooling Associates, Inc. DBA MoldMinds.com will operate as TK Mold's silent managing agency for the North American market. MoldMinds.com is the market-facing identity. All client relationships, communications, and commercial activity in the U.S. and Americas will be managed under this brand. TK Mold's name, intellectual property, and customer relationships are protected at all times.

Optional: TK Mold US Operating Structure

If TK Mold leadership prefers a more direct brand structure, Henderson Tooling Associates, Inc. is prepared to operate formally as TK Mold US. The domain **tkmold.us** is already secured. The website will be built to TK Mold brand standards at Henderson Tooling Associates, Inc.'s expense upon agreement.

Technical Expert Deployment

MoldMinds.com will coordinate the deployment of technical experts to customer facilities across North America including TK Mold's own engineers for start-ups and commissioning, as well as MoldMinds.com's own growing U.S. team for ongoing support, troubleshooting, diagnostics, modifications, and repairs. All travel, lodging and per diem costs for technical experts deployed by MoldMinds.com on behalf of TK Mold are covered by TK Mold. MoldMinds.com handles all logistics and client-side communication throughout.

The MoldMinds.com Team

Henderson Tooling Associates, Inc. will build a dedicated U.S. team in phases as the partnership grows, managed and accountable through MoldMinds.com.

TECHNICAL PERSONNEL

- › Process engineers deployable on demand
- › Tooling engineers for on-site support
- › Start-up and commissioning specialists
- › Engineering change and repair technicians

COMMERCIAL TEAM

- › Sales representatives for new business
- › Sourcing specialists for offshore tooling
- › Marketing and digital brand management
- › Client relationship management

05 COMMUNICATIONS AND CLIENT RELATIONS

MoldMinds.com will serve as the primary communication bridge between TK Mold's teams in Asia and all customers and partners in North America. This includes managing technical correspondence, coordinating project timelines, handling escalations, and representing TK Mold's capabilities with consistency and professionalism.

06 NEW BUSINESS PIPELINE

The principal of Henderson Tooling Associates, Inc. calls on injection molders across North America regularly in a separate capacity. This creates direct, ongoing access to the exact customer base TK Mold wants to reach. Those conversations produce introductions to TK Mold's capabilities through the MoldMinds.com commercial team. New business leads converted through this channel will carry a finders fee applicable to each project. This pipeline costs TK Mold nothing to access and grows stronger as the MoldMinds.com team expands.

07 OFFSHORE TOOLING SOURCING FOR THE AMERICAS

MoldMinds.com will also serve as a sourcing partner for North and South American companies looking to procure tooling through reliable Asian manufacturers including TK Mold. Henderson Tooling Associates, Inc. will manage all RFQ coordination, vendor qualification, technical reviews, and client communication for sourced projects.

08 LONG-TERM GOAL: U.S. PHYSICAL OPERATIONS

The long-term objective is to establish a physical facility in North America functioning as TK Mold's U.S. service and operations hub. Planned capabilities include mold engineering and design, engineering changes, start-up and commissioning, modifications, repairs, and on-site consulting. A phased investment plan will be developed jointly as the partnership grows. This facility would significantly reduce customer response times, lower the cost of technical deployments, and give TK Mold a permanent, credible presence in one of the most important tooling markets in the world.

09 COMPENSATION STRUCTURE

COMPONENT	STRUCTURE	NOTES
Monthly Agency Retainer	\$10,000 USD per month	Negotiable. Reflects full agency scope including team management.
Technical Deployment Costs	Covered by TK Mold	All travel, lodging and per diem for technical experts deployed by MoldMinds.com on behalf of TK Mold.
Finders Fee	Percentage of project value (TBD)	Applicable to new business introduced and converted through MoldMinds.com.
Sourcing Commissions	To be agreed	Applicable to offshore tooling projects sourced and managed through MoldMinds.com.
TK Mold US Website	At Henderson Tooling Associates cost	tkmold.us built to TK Mold brand standards upon agreement at no cost to TK Mold.

10 PROPOSED NEXT STEPS

- 1 TK Mold leadership reviews this proposal and provides initial feedback.
- 2 Joint meeting to confirm preferred operating structure: MoldMinds.com agency, TK Mold US, or a combination of both.
- 3 Agreement reached on finders fee percentage, sourcing commission terms, and final retainer amount.
- 4 Legal review and execution of a formal partnership agreement.
- 5 Henderson Tooling Associates, Inc. transitions all U.S. client communications and marketing to the agreed brand framework.
- 6 Build-out of tkmold.us begins immediately upon agreement execution at no cost to TK Mold.
- 7 Phased hiring of the U.S. technical and commercial team begins.
- 8 Joint planning for the long-term U.S. physical facility commences.

11 CLOSING

The market conditions that once made it straightforward to send tooling to Asia and wait are changing. North American customers are looking for partners who understand this and are positioned to respond. Henderson Tooling Associates, Inc. DBA MoldMinds.com is being built to be exactly that partner, operating on behalf of TK Mold in the Americas.

TK Mold has already invested in this direction. The momentum is real. This proposal is about putting the right structure around that momentum so it can be sustained and grown for the long term, regardless of what the market brings next.

This is a straightforward arrangement that is good for TK Mold, good for North American customers, and worth doing. We look forward to the conversation.

AGREEMENT AND ACKNOWLEDGMENT

By signing below, both parties acknowledge receipt of this proposal and agree to proceed in good faith toward a formal partnership agreement.
